Test	Units	Results Graphic	Normal Range
MYCOPLASMA PNEUMONIAE IGM TEST MYCOPLASMA PNEUMONIAE IGM.....REACTIVE METHOD: A RAPID ENZYME IMMUNOASSAY (EIA) REFERENCE RANGE: REACTIVE TEST RESULT: A REACTIVE RESULT INDICATES THE PRESENCE OF IGM TO MYCOPLASMA PNEUMONIAE. NON REACTIVE TEST RESULT:NON REACTIVE RESULTS INDICATE EITHER THE ABSENCE OF IGM TO M.PNEUMONIAE ,OR LEVELS BELOW THE LIMIT OF DETECTION FOR THE ASSAY. Mycoplasma pneumoniae is a member of a group of degenerate bacteria lacking a cell wall. M. pneumoniae was the first human pathogen identified in the group and causes up to 20% of all cases of pneumonia. Mycoplasmal pneumonia presents with flu-like symptoms , however unlike most viral and bacterial pneumonias , mycoplasmal pneumonia is more gradual in both presentation and recovery. M. pneumoniae infections are usually grouped in the category of atypical pneumonia. Test results should be used in conjunction with information available from the patient clinical evaluation and other available diagnostic procedures. Specific IgM Ab to M.pneumoniae are usually detected in patients with a recent primary infection. They may be found in patients with reactivated or secondary infections and are sometimes found in patients with no other detectable evidence of recent infection. In addition, IgM to M. pneumoniae has been shown to persist for extended periods (2-12 months) in some patients. Comment: " Physicians need to avoid patient treatment based solely on any single test result,and should interpret all results in the context of other clinical and laboratory features" " Results from immuno-suppressed individuals should be interpreted with caution " "Positive test results may not be valid in persons who have received blood transfusions or other blood products within the past several months." We recommend that patients that request tests under Direct test Access

INFLUENZA A/B TEST METHOD: BD VERITOR SYSTEM INFLUENZA A ANTIGEN..... NEGATIVE NEGATIVE INFLUENZA B ANTIGEN..... NEGATIVE NEGATIVE INTERPRETATION: POSITIVE TEST FOR FLU A = INFLUENZA A ANTIGEN PRESENT. POSITIVE TEST FOR FLU B = INFLUENZA B ANTIGEN PRESENT. NEGATIVE TEST FOR FLU A AND FLU B= NO ANTIGEN DETECTED. A NEGATIVE TEST RESULT DOES NOT ELIMINATE THE POSSIBILITY OF INFLUENZA A OR INFLUENZA B INFECTIONS, AND SHOULD BE CONFIRMED BY VIRAL CULTURE OR AN FDA-CLEARED INFLUENZA A AND B MOLECULAR ASSAY. METHOD: CHROMATOGRAPHIC IMMUNOASSAY BY RAPID DETECTION OF FLU A + B BD VERITOR SYSTEM. Comment: " Physicians need to avoid patient treatment based solely on any single test result,and should interpret all results in the context of other clinical and laboratory features" We recommend that patients that request tests under Direct test Access model, to discuss all analysis reports with a physician or authorized healthcare professional.
