Triage Questions

Did you confirm that the [pharmacy](#) you will select is within your network?

Yes

¿Confirmaste que la [farmacia](#) que seleccionarás es participante en tu plan médico?

Yes

Visit Notes

We strongly encourage you to share the following record of today's visit with your primary care physician.

Contact phone number: _____

Mode of Communication: Telehealth

HPI:

12-year-old female evaluated via telemedicine for persistent fever. The patient was recently started on antibiotics; however, father reports continued fever despite treatment. Associated upper respiratory symptoms reported. Denies shortness of breath, chest pain, or severe systemic symptoms. Clinical picture concerning for ongoing infectious process requiring further evaluation.

PMH:

Denied

PSH:

Denied

Medications:

Recent antibiotic (name not specified)

Allergies:

NKA

PE (Telemedicine – Limited by Modality):

Gen: Mildly ill appearing, no acute distress

Resp: No respiratory distress

ENT: URI symptoms reported

Assessment:

Persistent febrile illness despite antibiotic therapy. Differential includes viral upper respiratory infection, atypical infection (including Mycoplasma), resistant bacterial infection, or early systemic infection. Further laboratory evaluation indicated.

Plan:

Order labs: CBC with differential, COVID-19 Ag, Influenza A & B, Mycoplasma IgM
Continue supportive care: hydration, antipyretics as needed Monitor response to current antibiotic therapy Red flags → ER: persistent high fever, lethargy, respiratory distress, chest pain, dehydration, altered mental status Reinforced close monitoring given persistent fever despite antibiotics Follow-Up:

Follow up after lab results Return sooner if symptoms worsen Patient voiced understanding and agreement with the plan.

Addendum added on 04/16/2026 08:28 PM AST

We strongly encourage you to share the following record of today's visit with your primary care physician.

Contact phone number: _____

Mode of Communication: Telehealth

HPI:

12-year-old female evaluated via telemedicine for laboratory review. Patient currently on amoxicillin for upper respiratory symptoms. Labs notable for reactive Mycoplasma pneumoniae IgM. Patient reports ongoing respiratory symptoms. No severe distress, chest pain, or systemic complications reported.

PMH:

Not reported

PSH:

Denied

Medications:

Amoxicillin

Allergies:

Not reported

PE (Telemedicine – Limited by Modality):

Gen: Mildly ill appearing, no acute distress

Resp: No respiratory distress reported

Assessment:

Atypical respiratory infection consistent with *Mycoplasma pneumoniae* (IgM reactive). Current treatment with amoxicillin is not effective for atypical organisms. Differential includes viral URI vs atypical pneumonia. No red flag symptoms at this time.

Plan:

Discontinue amoxicillin Initiate appropriate coverage for atypical pathogens (macrolide class) Supportive care: hydration, antipyretics as needed Red flags → ER: worsening cough, respiratory distress, persistent fever, chest pain, lethargy Educated caregiver on expected course and need for appropriate antibiotic coverage Follow-Up:

Follow up if no improvement in 48–72 hours Return sooner if symptoms worsen Patient's caregiver voiced understanding and agreement with the plan.
